SUMMARY

AI Automation & Solutions Engineer with 4+ years delivering end-to-end automation and AI products for businesses. I build full-cycle solutions — n8n / Make workflows, LLM-powered agents and chatbots, CRM and API integrations, Python data pipelines, and full-stack web apps on NextJS / React. I own projects from discovery and architecture through deployment and handover, and care about clean, maintainable systems clients can actually run. Founder of Ahrim AI Lab.

CORE SKILLS

AI / LLM: OpenAI API (Realtime + Chat), LLM & multi-agent systems, RAG (LangChain · Qdrant), chatbots, prompt engineering, voice AI (WebRTC, STT/TTS)

Automation: n8n (+ MCP-driven tooling), Make, workflow design, CRM automation (HubSpot), webhooks

Backend: Python (FastAPI), Node.js, REST APIs, web scraping & enrichment, SIP telephony

Full-stack: Next.js 16, React 19, TypeScript, Tailwind

Data / Infra: PostgreSQL, Docker, Vercel, VPS / Linux, CI/CD, Git

EXPERIENCE

Founder & AI Automation Engineer — Ahrim AI Lab (Self-employed)

2022 – Present

AI automation & solutions for international clients — full-cycle, freelance / agency

- Built & shipped live AI products end-to-end — LLM voice agents, chatbots and automations that qualify leads and cut response time — owning product, full-stack, integrations and infra.
- Designed n8n / Make automations connecting CRMs, messengers and external APIs into reliable end-to-end pipelines with error handling and monitoring.
- Developed Python scrapers/parsers for data collection and enrichment, feeding dashboards and downstream automations.
- Shipped full-stack web apps (Next.js / React, REST APIs, PostgreSQL) and deployed them with Docker / Vercel.

SELECTED PROJECTS

- **BrokerDesk AI** (brokerdesk-ai.com) — live SaaS for UAE real-estate brokerages (Next.js 16 · OpenAI Realtime · HubSpot): AI voice agents (inbound & outbound), web chat & WhatsApp demos, Cal.com booking that auto-advances HubSpot deals, bilingual, compliance-by-design; Vercel, Lighthouse 88/100/100. Founder & builder.
Live demo: brokerdesk-ai.com
- **Agentic RAG Service** (FastAPI · LangChain · Qdrant) — production retrieval-augmented Q&A answering strictly from an ingested knowledge base with inline source citations; provider-agnostic (swap OpenAI → self-hosted Llama / Mistral in one adapter), clean hexagonal architecture, retrieval-quality eval harness (precision / recall@k, MRR), 36 tests, strict mypy + ruff, Docker. **Open source:** github.com/ahrimmedia-beep/rag-system
- **AI Voice Agent Platform** (Voximplant · OpenAI Realtime · n8n) — production inbound & outbound phone agents with real-time transcription, function-calling lead capture, barge-in and call recording, orchestrated by **12 live n8n workflows (0% failure rate)** with webhook-driven CRM sync; engineered low-latency call setup and migrated OpenAI Realtime beta→GA with zero downtime. **Live demos:** [outbound 60-sec call](#) · [inbound receptionist \(24/7\)](#)
- **Multi-Agent Ad-Campaign System** (Python) — autonomous agents that run paid lead-gen on a large online marketplace: competitor scouting, AI-generated multi-listing ads (uniqueness-checked), automated promotion behind a budget guard, and a 24/7 LLM chat-assistant that qualifies leads and hands off via Telegram. Multi-tenant, config-driven.
- **Sales Automation & Lead-Gen System** (Python · n8n · CRM) — end-to-end outbound engine: scrapers with data-enrichment and dedup, a scored CRM pipeline, cold-email warmup sequences, an AI outbound dialer and Telegram alerts — with compliance-aware calling (disclosure + opt-out).
